Application for Tunnel Digging Internship at CarrotCorp

Dear CarrotCorp Team,

As an enthusiastic and highly motivated rabbit with a strong passion for efficient digging and user-friendly burrow design, I am thrilled to hop forward and apply for your Software Development Internship.

Throughout my time at Hare University, where I am pursuing a Master's in Tunnel Engineering and Data Crunching, I have built a solid foundation in collaborative digging algorithms, patch optimization, and scalable carrot storage solutions. I've contributed to several open-source warren management tools, including BurrowJS and LettuceSync, and recently published a preprint on "Asynchronous Thump Signaling for Distributed Rabbit Networks."

I was particularly excited to discover that CarrotCorp values curiosity, rapid iteration, and nibble-sized user feedback—values I hold close to my fluffy heart. Whether it's designing intuitive interfaces for hedgehogs or optimizing backend systems to withstand squirrel-related latency, I'm eager to bring my paws-on experience and twitchy attention to detail to your team.

Thank you for considering my application. I would love the opportunity to discuss how my background in burrow systems and my relentless appetite for innovation could benefit CarrotCorp. I am available for interviews via thump, chirp, or email at your convenience.

With warmest regards and a soft nose wiggle,

Flopsy Whiskerfoot
